## SERVO-PROPORTIONAL VALVES DIRECT OPERATED WITH INTEGRATED ELECTRONICS

D936 SERIES ISO 4401 SIZE 03

Rev. -, September 2019

PROPORTIONAL SOLENOID OPERATED VALVE IN 4/4-WAY SLEEVE DESIGN FOR SERVO QUALITY PERFORMANCE OFFERING HIGH ROBUSTNESS AND RELIABILITY

WHAT MOVES YOUR WORLD

Whenever the highest levels of motion control performance and design flexibility are required, you'll find Moog expertise at work. Through collaboration, creativity and world-class technological solutions, we help you overcome your toughest engineering obstacles. Enhance your machine's performance, and help take your thinking further than you ever thought possible.

### **PRODUCT OVERVIEW**

Moog D936 Series valves are direct operated Servo-Proportional Valves driven by a proportional solenoid. They are equipped with integrated electronics and closed-loop position control of the spool.

The valves are suitable for electrohydraulic control of position, speed, pressure and force in open and closed loop control systems.

This valve series is characterized by a compact design that allows a space-saving system design.

The robust design allows for a high resistance against harsh environmental conditions like high vibrations and temperature.

The valve offers analog interfaces for command signal and spool position feedback. It is, however, equipped with modern electronics with a digital core that offers high energy efficiency while delivering high static and dynamic control performance.

D936 Servo-Propotional Valve

D936 Servo-Propotional Valve					
Valve design	1-stage, with spool and bushing				
Size according ISO 4401	03				
Mounting pattern	ISO 4401-03-03-0-05 (with or without leakage oil connection Y)				
Rated flow at $\Delta p_{N}$ 35 bar (500 psi)/spool land	4 to 40 l/min (1.06 to 10.6 gpm)				
Maximum operating pressure - port P, A, B	350 bar (5,000 psi)				
Step response time for 0 to 100 % stroke	11 ms				

### FEATURES AND BENEFITS

Features	Benefits
4/4-way design including failsafe position	Reduces need for additional safety components
Servo valve design with fully hardened spool and bushing	High accuracy and wear resistance
Electronics mechnically uncoupled from housing	High vibration resistance for longer service life and less machine downtime
Next-generation electronics with digital core and energy efficient components	Low thermal stress and long electronics lifecycle
Optimized overlaps and clearances between spool and bushing	Low internal leakage and high contamination resistance
Electronics placed on the solenoid	Compact design for minimum installation space

### **DESCRIPTION OF OPERATION**

#### Valve Design

The Moog D936 Series Servo-Proportional Control Valves are closed-loop hydraulic products that are used in industrial applications. These valves are electrical feedback valves, which means that the position control loop for the spool is closed by a position transducer and the integrated valve electronics.

The spool (9) is mounted in a hardened steel bushing (8) that provides high control accuracy and superior wear resistance. The spool is deflected by the proportional solenoid (5) that operates against the return spring (7).

The onboard electronics (3) are mounted on top of the solenoid to create a compact and space-saving valve shape. The electronics are uncoupled from the electronics housing and provide a high resistance against vibrations and shocks.

### Operation

An electric command signal (spool position set point) is applied to the valve electronics via the main connector (1). A position transducer (4) measures the actual position of the spool. The electronics compare the spool position and the command signal, and control the Pulse Width Modulated (PWM) current to the proportional solenoid. If a control deviation occurs, the PWM current is changed to move the spool to the desired position and the PWM current is kept at a level that holds the spool in this position.

Thus, the position of the spool is proportional to the electric command signal.

- 2 Electronics housing
- 3 Valve electronics
- 4 Position transducer (LVDT)
- 5 Proportional solenoid
- 6 Ports
- 7 Spring
- 8 Bushing
- 9 Spool

### **General Technical Data**

Valve design	1-stage, with spool and bushing
Mounting pattern	ISO 4401-03-03-0-05 (with or without leakage oil connection Y)
Installation position	Any
Weight	2.9 kg (6.4 lb)
Storage temperature range	-40 to +80 °C (-40 to +176 °F)
Ambient temperature range	-20 to +60 °C (-4 to +140 °F)
Vibration resistance	30 g, 3 axis, 10 Hz to 2 kHz
Shock resistance	50 g, 6 directions, 3 ms
MTTF <sub>d</sub> value according to EN ISO 13849-1	150 years

### Hydraulic Data

Maximum operating pressure				
Port P, A, B	350 bar (5,000 psi)			
Port T without Y	280 bar (4,00	0 psi) <sup>1)</sup>		
Port T with Y	350 bar (5,00	0 psi)		
Port Y	Depressurize	d to tank <sup>1)</sup>		
Rated flow at $\Delta p_N 35$ bar (500 psi)/spool land for linear flow characteristics (for others see ordering code)	4 l/min (1.06 gpm)	12 l/min (3.2 gpm)	24 l/min (6.3 gpm)	40 l/min (10.6 gpm)
Leakage flow (rate) (≈ zero lap) <sup>2)</sup>	0.2 l/min (0.05 gpm)	0.4 l/min (0.11 gpm)	0.7 l/min (0.19 gpm)	1.3 l/min (0.34 gpm)
Maximum allowable pressure drop regarding the transition to the failsafe position <sup>3)</sup>				
Failsafe options 1 and F	350 bar (5,000 psi)	350 bar (5,000 psi)	350 bar (5,000 psi)	160 bar (2,320 psi)
Failsafe option 2	350 bar (5,000 psi)	350 bar (5,000 psi)	260 bar (3,770 psi)	120 bar (1,740 psi)
Hydraulic fluid	Hydraulic oil a Other fluids u	is per DIN 5152 pon request.	24 parts 1 to 3 a	nd ISO 11158.
Temperature range	-20 to +80 °C	(-4 to +176 °F)		
Viscosity range				
Recommended viscosity range at 38 °C (100 °F)	15 to 100 mm²/s (cSt)			
Maximum permissible viscosity range at 38 °C (100 °F)	) 5 to 400 mm²/s (cSt)			
Recommended cleanliness class as per ISO 4406				
For functional safety	19/16/13			
For longer service life	17/14/11			

1) In order to avoid an emptying of the return line, a back pressure of 2 bar (30 psi) should be maintained on the T and Y connections.

2) Measured at 140 bar (2,000 psi) system pressure, oil viscosity 32 mm2/s and oil temperature 40 °C (104 °F)

3) Values apply for 4-way operation, please refer also to the information given in the section "Failsafe Functions".

### Typical Static and Dynamic Data<sup>1)</sup>

Step response time for 0 to 100 % stroke	11 ms
Threshold	< 0.2 %
Hysteresis	< 0.2 %
Null shift at ∆T = 55 K (131 °F)	< 1.5 %
Sample deviation of rated flow	< 3 %

1) Measured at 140 bar (2,000 psi) system pressure, 32 mm<sup>2</sup>/s (32 cSt) oil viscosity and +40 °C (+104 °F) oil temperature.

### **Electrical Data**

Duty cycle	100 %
Degree of protection according to IEC/EN 60529	IP65 (with mounted mating connectors)
Supply voltage <sup>2)</sup>	24 V <sub>DC</sub> (18 to 32 V <sub>DC</sub> )
Permissible ripple of supply voltage	2.5 V <sub>PP</sub>
Maximum current consumption <sup>3)</sup>	1.4 A
Maximum power consumption	33.6 W (1.4 A at 24 V <sub>DC</sub> )
Fuse protection, external, per valve	2 A (slow)
EM compatibility	• Emitted interference as per DIN EN 61000-6-4
	<ul> <li>Immunity to interference as per EN 61000-6-2 (evaluation criterion A)</li> </ul>

2) All connected circuits must be isolated from the mains supply by "electrical separation" in accordance with IEC/EN 61558-1 and IEC/EN 61558-2-6. Voltages must be limited to the safety extra-low voltage range in accordance with EN 60204-1. We recommend the use of SELV/PELV power packs.

3) Measured at +25 °C (+77 °F) ambient temperature and 24 V supply voltage

#### Failsafe functions

The D936 valve series offers three different fail-safe options. They can be chosen at position 6 of the ordering code.

For options 1 and 2, the spool is moved to the 4<sup>th</sup> position by spring force when the electrical supply of the valve is switched off. Option 1 connects ports A and B with port T and thus relieves the pressure from ports A and B. Option 2 blocks all valve ports, but there will still remain a small amount of internal leakage, so a cylinder or motor may creep when it is under load. For option F, the spool is moved to a stroke of about 110% in the direction  $P \rightarrow B$  and  $A \rightarrow T$  when switching off the electrical power.

Hydraulic symbols for the different options are shown below:

#### Please note:

- For both options 1 and 2 the spool is moved through the fully open Position P→B and A→T when travelling to the 4th position. That means there will be full flow for a short amount of time.
- 2) The switching force of the spring is limited, so there are limits concerning the maximum allowable pressure drop to reach the failsafe position. These limits depend on the rated flow and the failsafe option. Limits for reaching the failsafe position are given on page 6.
- 3) The maximum pressure drop for leaving the failsafe position is also limited. In some cases, those limits can be lower than the pressure drop limits to reach the failsafe position. Depending on the system configuration, it may be necessary to reduce or shut down the hydraulic supply pressure to leave the failsafe position.
- 4) For certain errors (e.g. power supply voltage too low), the valve electronics will switch off the solenoid power and the valve will move to the failsafe position. The solenoid power will be switched on again as soon as the error is no longer present.

#### Port Pattern of Mounting Surface

The mounting surface must conform to ISO 4401-03-03-0-05. Please observe a mounting length of a minimum 77 mm (3.0 in) and 0-ring recesses for Y.

For maximum flow the ports for P, T, A and B must be designed with Ø 7.5 mm (0.3 in), not according to the standard.

The evenness of the connecting surface has to be 0.01 mm (0.0004 in) over 100 mm (3.94 in), and average surface finish R<sub>2</sub> better than 0.8  $\mu$ m (0.0000314 in).

### ELECTRONICS Pin Assignment for Valves with 6-pole + PE Connector, Pin Contacts

According to EN 175201-804, mating connector (type R or S, metal) with leading protective earth pin ()

Pin	Pin assignment	Signal type <sup>1)</sup>	
		Voltage floating	Current floating <sup>2)</sup>
A	Supply voltage	$U_{A-B} = 24 V_{DC} (18 \text{ to } 32 V_{DC}) \text{ referenced to GMD}$	ND (reverse polarity protected against
В	GND	Power ground/signal ground	
С	Reference point actual value	Reference for Pin F	
D	Command signal - spool position	$U_{in} = U_{D-E}$ R <sub>in</sub> = 10 kΩ	$I_{in} = I_{D} = -I_{E}$ $R_{in} = 200 \Omega$ $I_{max} = \pm 25 \text{ mA}$
E	Reference point Input rated command	Reference for pin D <sup>2)</sup>	
F	Actual value - spool position	U <sub>F-C</sub> = -10 to 10 V; U <sub>F-C</sub> is proportional to the spool position; 0 V corresponds to the spool center position	$I_{out}$ = 4 to 20 mA referenced to PIN C; $I_{out}$ is proportional to the spool position; 12 mA corresponds to the spool center position; the output is short-circuit-proof; $R_L$ = 0 to 500 $\Omega$
<b>=</b>	Protective earth (PE)	Connected with valve body	

1) Signal ranges see next page.

2) The potential difference between pins D or E referenced to pin B must be between -15 and +32 V.

### ELECTRONICS Ordering Codes and Signals for Valves with 6-pole + PE Connector

Ordering code position 10	Command signal ±100% spool position		Actual value ±100 % sp	ool position
Н	U <sub>D</sub> - U <sub>E</sub>	-10 to +10 V	U <sub>F</sub> - U <sub>C</sub>	-10 to +10 V
X	I <sub>D</sub>	-10 to +10 mA	I <sub>F</sub>	4 to 20 mA
E	I <sub>D</sub>	4 to 20 mA	I <sub>F</sub>	4 to 20 mA

Note: See inside back cover for complete ordering information.

#### Command Signal Current Floating, Ordering Code X or E

The spool position is proportional to  $I_D = -I_E$ .

For a command signal I<sub>D</sub> = 20 mA (code E) or +10 mA (code X) the spool moves to 100 % P  $\rightarrow$  A and B  $\rightarrow$  T.

For a command signal  $I_D = 12 \text{ mA}$  (code E) or 0 mA (code X) the spool is in the defined center position.

#### Command Signal Voltage Floating, Ordering Code H

The spool position is proportional to  $U_p - U_F$ .

For a command signal U  $_{\rm D}$  – U  $_{\rm E}$  = +10 V the spool moves to 100 % P  $\rightarrow$  A and B  $\rightarrow$  T.

For a command signal  $U_D - U_E = 0$  V the spool is in the defined center position.

#### Actual Value 4 to 20 mA, Ordering Code X or E

The signal can be used for monitoring and fault detection purposes. The spool position is proportional to  $I_{out}$ . The spool position corresponds to 4 to 20 mA. At 12 mA the spool is in center position.

20 mA corresponds to 100 % valve opening P  $\rightarrow$  A and B  $\rightarrow$  T. A cable fault is detected by I<sub>aut</sub> = 0 mA.

Actual value U\_{\_{out}} = 2 to 10 V with resistor RL = 500  $\Omega$  (0.25 W) provided by the customer.

#### Actual Value -10 to +10 V, Ordering Code H

The spool position is proportional to Uout. The spool position corresponds to -10 to +10 V. At 0 V the spool is in center position.

+10 V corresponds to 100 % valve opening P  $\rightarrow$  A and B  $\rightarrow$  T.

### **FLOW CALCULATION**

When the valve is open the prevailing flow is dependent not only on the spool position, (i.e. the opening cross section of the valve), but also on the pressure drop at the individual lands. When the valve is deflected at 100 %, it delivers the rated flow with the rated pressure drop. The rated flow of a servo valve corresponds to a pressure drop of 35 bar (500 psi) per land, equating to 70 bar (1,000 psi) for two lands. When a valve is opened at 100 %, the flow can be calculated as a function of the actual pressure drop with the aid of the formula below, or it can be taken from the diagram.

$$Q = Q_{N} \cdot \sqrt{\frac{\Delta p}{\Delta p_{N}}}$$

 $\begin{array}{ll} & Q\left[l/\min\left(gpm\right)\right] & act \\ & Q_{N}\left[l/\min\left(gpm\right)\right] & rat \\ & \Delta p\left[bar\left(psi\right)\right] & act \\ & \Delta p_{N}\left[bar\left(psi\right)\right] & rat \end{array}$ 

actual flow rated flow actual pressure drop per spool land rated pressure drop per spool land

#### Flow Chart

When operating the valves close to these application limits, it is necessary to drill the ports to the maximum possible diameters (see "Port Pattern of Mounting Surface" on page 14).

### **ABOUT MOOG**

#### **Hydraulic Solutions**

Since Bill Moog invented the first commercially viable servo valve in 1951, Moog has set the standard for worldclass hydraulic technology. Today, Moog products are used in a variety of applications - providing high power, enhanced productivity and ever better performance for some of the worlds most demanding applications.

#### **Electric Solutions**

Clean operation, low noise generation, less maintenance and reduced power consumption make Moog electric solutions ideal for applications worldwide. Moog is the ideal partner for applications where transitioning technologies requires special expertise.

#### **Hybrid Solutions**

By incorporating the advantages of existing hydraulic and electric technologies - including modular flexibility, increased efficiency and cleanliness - into innovative hybrid solutions, Moog offers new performance potential in specialized applications.

**Flight Simulation**

### MOOG GLOBAL SUPPORT

Moog Global Support is our promise to offer world-class Repair and Maintenance Services delivered expertly by our trained technicians. With the reliability only available from a leading manufacturer with facilities around the world, Moog offers you service and expertise you can count on to keep your equipment operating as it should.

This promise offers many benefits to our customers including:

- Reduce your downtime by keeping critical machines running in peak performance
- Protect your investment by ensuring reliability, versatility and long-life of products
- Better plan your maintenance activities and make systematic upgrades
- Leverage our flexible programs to meet the unique service requirements of your facility

Look to Moog for global support including:

- Repair services using OEM parts are performed by trained technicians to the latest specifications
- Stock management of spare parts and products to prevent unplanned downtime
- Flexible programs, tailored to your needs such as upgrades, preventative maintenance and annual/ multiyear contracts
- On-site services bring the expertise to you, providing quicker commissioning, set-up and diagnostics
- Access to reliable services that are guaranteed to offer consistent quality anywhere in the world

For more information on Moog Global Support visit **www.moog.com**
